## Problem Statement:

**Amena** has just learned alphabets. She can read write from **a** to **z** only in lowercase. But, Amena always writes in alphabetic order (alphabetic order means from a to z in sorted order) what she saw. Also she writes a line as a word. For example, she writes monkey as ekmnoy. Her mother wants to test her reading and writing skills. Her mother gave her some lines, can you tell what she will write?

**Note:** Input will be given by **EOF**.

## Input Format

- Input consist of a line **S**. The line will contain lowercase letters and spaces. It is possible that there are multiple spaces together and the line end with spaces.

## Constraints

1.  $1 \leq |S| \leq 10^5$

## Output Format

- Output what Amena will write.

## Sample Input 0

```
monkey
i love flower
```

## Sample Output 0

```
ekmnoy
eefilloorvw
```
