Problem Statement

You will be given a binary tree as input in level order. You need to output the sum of all node's values in that tree except the leaf nodes.

For example:

The output for the above tree will be: 60

Input Format

- Input will contain the binary tree in level order. **−1** means there is no node available.

Constraints

- $1 \leq \text{Maximum number of nodes} \leq 10^5$
- $1 \leq \text{Node's value} \leq 1000$

Output Format

- Output the total sum of that tree except the leaf nodes.

Sample Input 0

10 20 30 40 50 -1 60 -1 -1 -1 -1 -1 -1

Sample Output 0

60
